Hammar LifeSaver LS 101

Self-inflating horseshoe lifebuoy

Everyone who loves boating knows that it offers relaxation, lets you experience nature and gives you an infinite sense of freedom. But in order to enjoy this experience fully, safety onboard is essential. It's a matter of taking responsibility – for yourself and your passengers.

LifeSaver is a self-inflating horseshoe lifebuoy designed for all types of boats, both big and small. Its rugby-ball shape makes it easy to stow, attractive to see and above all, easy to throw, both far and accurately. As soon as it hits the water, the outer casing opens and the horseshoe lifebuoy inflates automatically. The outer casing is attached to the lifebuoy by a cord and acts as a drift anchor to prevent the lifebuoy from blowing away from the person in distress.

LifeSaver was developed in cooperation with the Swedish Sea Rescue Society. This was done because none of the inflatable lifebuoys on the market met their rigorous safety requirements. The objective was to produce a new lifebuoy in which all of the weak points in the existing products had been dealt with. The project was a success.

Today, the Swedish Sea Rescue Society uses LifeSaver in its efforts to save lives. We take this as proof that we have hit the mark. Other areas where LifeSaver could be put to good use include patrolling the coasts, the emergency services and when kayaking.

LifeSaver is available wherever boating equipment and accessories are sold, throughout the country. For additional information about our products, go to www.cmhammar.com.

We would be happiest if you never needed to use LifeSaver. But in case of emergency, it would be most gratifying to know that it saved someone's life.

Rescue close at hand

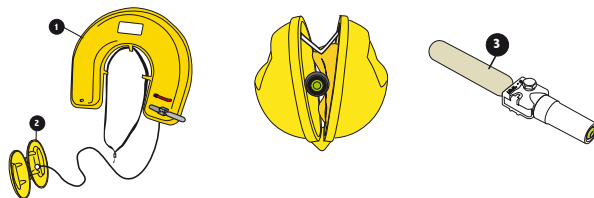

Its light weight and convenient shape make LifeSaver easy to stow onboard. The casing is made of UV and impact resistant plastic. The lifebuoy is made of a highly durable polyurethane-coated nylon fabric. LifeSaver can be easily fitted in the pulpit or on other railings with the stainless steel clip (accessory). Our stowing box (accessory) allows LifeSaver to discreetly blend in with other interior fittings. The accessory re-arming kit makes it possible to use LifeSaver numerous times. Weight 790 g (27.8 oz). Length 310 mm (12.2 in). Diameter 125 mm (4.9 in).

Experience the advantages of LifeSaver

- Self-inflating
- Easy to throw into the wind
- Includes a sea anchor, does not blow away
- Compact and easy to reach
- Clearly visible in the water
- Fits people of all sizes, including children
- Very durable
- Can be re-armed after use
- Easy to fasten around the body
- A person wearing the lifebuoy can be lifted
- It is possible to swim while wearing the lifebuoy
- Easy to remove from its holder
- Attractive design

How LifeSaver works

The horseshoe lifebuoy (1) and the water-sensitive inflation mechanism (3) are protected by a watertight casing (2). When LifeSaver is thrown, it opens 1-2 centimetres (≈ 0.5-1 in), exposing the inflation mechanism to water. Once in the water, the mechanism is activated and the horseshoe lifebuoy inflates automatically. The open casing is attached to the lifebuoy by a cord and acts as a sea anchor, preventing the lifebuoy from blowing away.

Using LifeSaver

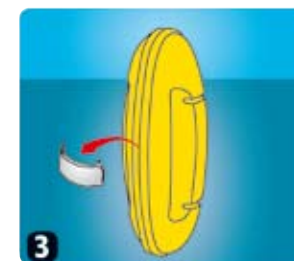

LifeSaver is easy and safe to use. Since it is always close at hand and requires no preparation, a person in distress can get help within seconds.

When an accident happens ...

Remove LifeSaver from its holder ...

or remove the clip.

Throw LifeSaver close to the person in distress. It is easy to throw accurately.

LifeSaver inflates itself!

Pull LifeSaver over your head and tighten the recovery strap.
