

TECHNICAL PRODUCT INFORMATION

HR-0500 EASY RELEASE

PRODUCT INFORMATION

In an emergency situation an early and controlled release of liferafts can save lives at sea. To manually release a liferaft, is many times the last possibility to launch a liferaft in a controlled manner, before the vessel is going under.

The Hammar Easy Release slip hook system is designed to be safe and easy to use in order to increase the possibilities to manually release liferafts and save lives.

FEATURES

- Strong construction in stainless steel, that will withstand 15 kN lashing load.
- Easy to release by one hand even under its maximum lashing load.
- Easy to install.

HOW IT WORKS

To manually release the raft, pull out the safety pin and the lashing will be released allowing the liferaft to be launched in a controlled manner.

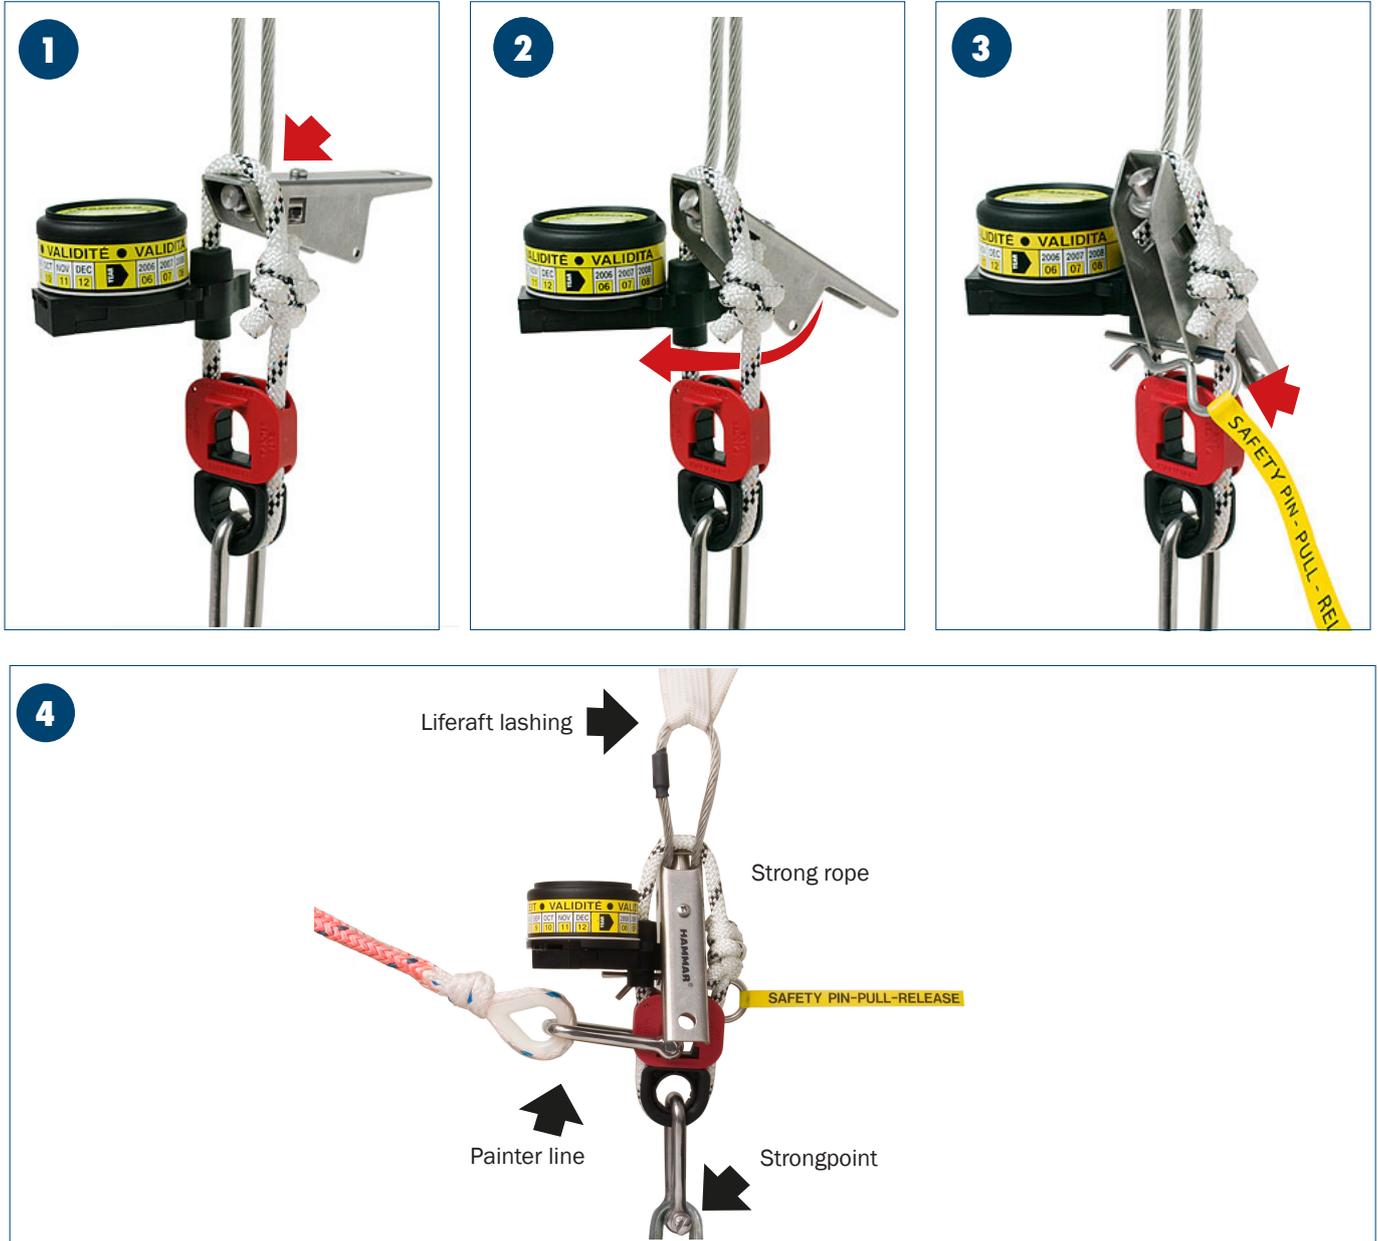

The Hammar Easy Release, HR-0500 is always used together with the Hammar H20 hydrostatic release. Should the vessel sink and the liferaft is not released manually the Hammar H20, which is activated by increasing water pressure, will automatically release the liferaft.

INSTALLATION

Before installation;

- Connect the H20 strong rope to a strongpoint on the deck or liferaft cradle with a shackle.
- Connect the liferaft lashing to the easy release wire loop and adjust so the lever will reach the strongpoint.

- 1** Remove the yellow thimble and insert the Easy Release lever and insert the tip of the easy release lever under the strong rope.
- 2** Pull down on the lever until the part with small holes is through the loop of the strong rope.
- 3** Insert the safety pin through the both holes as far as it will go.
- 4** Installation is now complete.
